

The ultimate gateway for data sharing...

vertex®

Where intuitive meets intelligent.

www.sorna.com/patents

...From any source to any destination.

Vertex is the industry's most advanced software for sharing, burning, importing, converting, viewing, and storing medical studies, images, and related documents. Vertex enables healthcare professionals to easily share and manage medical studies using a simple, streamlined process: **take DICOM or non-DICOM objects from any source** - PACS/VNA, paper scanners, DICOM and proprietary DISCs, video files, local and networked files, film digitizers - **and send to any destination** - the cloud, email, CD/DVD/Blu-Ray DISC, Secure DICOM Share (TLS), PACS/VNA. Vertex combines the best features of disparate medical imaging applications into a single, IT-friendly software with an intuitive interface that integrates seamlessly with existing hardware.

Experience the Vertex difference.

 Sorna

Intuitive Interface

Vertex's groundbreaking graphical user interface and all-encompassing architecture streamlines the user experience and accelerates operator training.

Installation-Free Client Deployment

Vertex simplifies workstation software deployment and upgrade procedures by utilizing Microsoft's ClickOnce technology, minimizing IT resource requirements.

DICOM and IHE Conformance

To ensure interoperability with your imaging enterprise, Vertex conforms to applicable DICOM and IHE standards.

Encryption

Vertex's DISC encryption is DICOM and FIPS 140-2 conformant, guaranteeing the security of PHI on CDs/DVDs generated.

One-Click De-Identification

Anonymize study data with one click to quickly create teaching files and/or research projects while maintaining patient confidentiality.

Transaction Tracking

Vertex provides peace of mind by tracking and logging transactions for HIPAA compliance.

Integration with Existing Hardware

Vertex maximizes your current investment in hardware through its seamless integration with all industry-leading autoloaders.

Reporting

Vertex's HL7 engine receives radiology report results from HIS, RIS, or EMR, allowing users to distribute reports to referring physicians via numerous sharing methods.

DICOMIZing

Create new or enhance existing studies with multi-media objects by DICOMizing image and video files, office and paper documents, and film via drag-and-drop functionality.

Importing DICOM and Proprietary DISCs

Import any CD, DVD, or Blu-Ray DISC containing DICOM data, as well as proprietary DISCs, into your PACS.

Paper Scanning

Connect any TWAIN-conformant device, quickly scan documents using pre-configured Profiles, and edit with one click.

Advanced Gateway Technology

Configure a virtually limitless number of Data Profiles to automatically meet workflows and share data created throughout the healthcare enterprise with outside destinations.

Expertly Developed

Vertex was developed by Sorna's industry experts with extensive engineering and service experience using feedback from our dedicated luminary facilities on their workflow needs.

Attended Workflow

Operators can simultaneously complete multiple tasks to maximize productivity.

Unattended Workflow

Data Profile configuration enables unattended operation, ensuring jobs are completed quickly and effectively with no operator interaction.

DISC-Embedded Viewing

Vertex embeds Sorna's intelligent, easy-to-use viewer on all DISCs automatically, improving your referring physician and patient experience.

Email

Rapidly share studies and radiology report results with any physician via email.

Cloud-Sharing

Distribute medical data to other healthcare facilities through Vertex's connection with leading suppliers of cloud-sharing solutions.

Secure DICOM Share

Directly and securely share studies with other healthcare facilities using Vertex's SDS functionality, which conforms to the DICOM TLS industry standard.

Video File Support

Browse to local and networked files from within Vertex to access numerous video file formats at a range of resolutions for DICOM conversion processing.

PACS Integration and Support

Vertex was developed to easily connect with your PACS in minutes, reducing installation time and cost.

Film Digitizing

Connect a VIDAR digitizer for film scanning, quickly digitize using pre-configured Profiles, and edit with one click.
