

Easy. Secure. Affordable: Your medical images on the fly

EASY

No IT headaches, downtime or migrations.

Just a smooth remote install and you're up and running. Easy to deploy, easy to oversee. Vaultara also tracks every transaction, making audits and oversight a snap.

Who wants medical data? Everyone.

Cloud solutions are on the rise—and so are breaches. Medical data is now more coveted than financial info, and in no field are leaks more costly.

Vaultara manages swift transfers while keeping sensitive data safe behind your firewall.

SECURE

AFFORDABLE

A cost structure as simple and straightforward as our product.

Unlike cloud solutions whose costs skyrocket with per-use charges and spikes, Vaultara allows for unlimited users and recipients, with no study-size limitations or costs. A supremely easy install and deploy process means no added IT spend. And better yet, our reasonable fixed price won't fluctuate just because you actually use it. Not now—and not ever.

vaultara

Easy. Secure. Affordable: Your medical images on the fly

Self-hosted image transfer keeps your medical records in-house and under your control.

Skip the risk and volatility of third-party cloud solutions - Vaultara lets you send or upload true DICOM images and associated reports directly to intended recipients. You control the permissions and the expiration time for the exchange.

Save money. Save time. And provide more responsive care for patients

Sometimes the best solutions are the simplest. Who needs the added costs and hassles of facility exchange networks or third-party software? Get and send your studies right when they're needed—all you need is an email address. Once permission is granted, authentication is underway—the file can be either viewed or downloaded according to your specifications.

Cross-device compatibility and seamless patient transfers

Response time matters in healthcare. Misplaced or unreadable CDs compromise efficient patient triage. With Vaultara, the records physicians need to see now are viewable anytime, anywhere, even on the road. Transferring patients? Move their studies instantly to the destination facility for uninterrupted care.

Vaultara's upload feature streamlines image exchanges for you and for your network, too

You know that CDs have inherent liabilities, and are less supported every day—many newer computers don't even have drives. But not everyone is modernizing as fast as your facility. Phase out unwanted CD deliveries from external facilities by leveraging our upload feature.
