

Remote radiology reading

Give Radiologists the remote tools they need right now

To help **radiologists work remotely** during these challenging times, we've seen an urgent need and increase in demand by hospital customers to get additional **Home Read** diagnostic display set-ups in place for **emergency funded projects**.

- Do you or your Rad Group need these too?

To meet those needs, our partner **BARCO** has increased its inventory levels and helped **Data Distributing** put together some aggressively priced packages.

While supplies last, please ask for a quote on special **Home Reading Packages** (displays only, or bundles with workstation or laptop, graphics box, speech mics, and BARCO's 3MP, 5MP, and 6MP Displays).

- Please forward this to your Rad Group too and have them give us a call!
